

COMMERCIAL OFFER

We offer for your attention products of Russian company LLC “AgroHolod”. Main business activities of our company are manufacturing and sales of frozen vegetable and fruit products. We built, manage and operate our own plant for shock freezing of vegetables and fruits based in Russian city Rostov-on-Don which meets the highest international quality standards and requirements. Main technological method of processing of products applied at freezing is so called “shock freezing” method (IQF technology). Another important advantage of our products is that for their manufacturing we are using domestic and not imported raw fruits and vegetables which were grown in our own and neighboring regions (South Federal region and Central regions of Russia). Fresh fruits and vegetables are shock frozen right after harvesting which allows to save and retain all the useful nutritional qualities and properties of products.

Thanks to application of advanced technologies and equipment shelf-life period of our frozen fruits and vegetables is 24 months!

We cooperate and are trusted by such companies as “Hortex” (one of the largest producers of frozen fruits and vegetables, Poland), “Russky Holod” (largest producer of ice cream, Russia), “Svoy Urozhay” (Russian producer and supplier of frozen mixed vegetables) and other leading companies in this industry.

We are looking forward to cooperation with new potential partners and importers of our products!

Products can be supplied in different form of cutting (cubes, strips, circles, etc.) Here are main mono product positions (frozen vegetables and fruits):
